Sport Violence at Palestinian Playgrounds

Abstract :The study aims to recognize the actual reasons that may lead to sport violence at Gaza Strip. To achieve that, a questionnaire concerning sport violence was applied on a sample consisting of (152). This questionnaire was designed by Rasim Younis (1986). The researcher used the descriptive design.

The study results showed that there is no system for protecting the referee, no awareness among people, and there is no punishment for people who practice violence.

The study recommended the followings:

- 1- Necessity of strengthening the relations and connections among sport institutes.
- 2- Specifying rewards to ethical players
- 3- Designing awareness programs about confronting sport violence in between pupils for physical education teachers.
- 4- Establishing programs and workshops
- 5- Stressing the importance of security procedures through sport competences.
- 6- Concentrating on the importance of punishment system by Sport Union.
